**MacAnd Cheese Ham Pie**

Who doesn’t love pie? Pie is amazing, no matter how you make it. Sweet, savory—the combinations are endless. This Mac and Cheese Ham Pie is one of the savory variety, and it’s hearty and completely comforting. We love it!

This seriously makes for such an easy dinner. You can use leftover ham if you happen to have it, and you don’t even have to precook the noodles. They just cook up in the liquid as it bakes in the oven. How easy is that?

The whole family loves this scrumptious dinner pie (though we work great for breakfast too), and with how easy it is, we must say we might love it even more than they do!

### INGREDIENTS: 30min to prepare serves 4-6

- 3 cups Cheddar cheese, grated
- 2 1/4 cups milk
- 1 cup cooked ham, cubed
- 1 cup diced macaroni, uncooked
- 1/2 cup original Bisquick mix
- 2 eggs
- 1/4 teaspoon salt

Fresh parsley, chopped, to garnish (optional)

---

**PREPARATION**

- Preheat oven to 400°F and lightly grease a 10-inch deep-dish pie plate.
- In a large bowl, combine 2 cups of the cheese, the ham, and macaroni and mix together. Spread in pie plate.
- In a blender, blend together milk and eggs until smooth. Add bisquick mix and salt and blend again. Mix with hand. Pour the mixture in pie plate.
- Bake until a knife inserted into the center comes out clean. 35-40 minutes. Sprinkle with remaining cheese and bake until cheese melts, just 1-2 minutes more. Let stand 10 minutes before serving. Sprinkle with parsley, if using. Enjoy!

---

### Madison County Village Election Results

The Madison County Board of Canvassers has canvassed the whole number of votes cast at the Village Elections held on the 19th day of June, 2018, do hereby certify that the following votes were received. For the Village of Hamilton, Frank Servadio received 23 votes and is hereby elected to the office of Justice in and for the Village of Hamilton. For Morristown offices; Michael Higgins received 33 votes and Judy Schlofeld received 37 votes and are hereby elected to the office of Village Trustee in and for the Village of Morristown.

June 21, 2018

On behalf of the Earlville Opera House’s Board of Directors, staff, and patrons, I would like to thank all those who helped to make the Earlville Opera House’s fundraiser by the Sherburne Community Choruses successful. The performance was a triumphant success on Friday and Saturday, June 8th and 9th. These events were a victory due to the in-kind and generous support of the 45 member Sherburne Community Chorus, who gave of their time to rehearsals to polish their performance to the perfection it was. Special thanks to Hugh C. Humphreys for narrating the story of “Pedro” which captivated and armed the hearts of everyone in the audience, as well as to the musicians who provided enchanting accompaniment: Sue Mason on Oboe; Doug Kent on Trumpet; Allie Rehn on Cello; Alyssa Jutting on Violin and Rosemary Jaytanie on Piano. In addition, a tremendous thank you to soloist Max Smith for a soul-shattering a cappella performance of “His Piano. In addition, a tremendous thank you to soloist Max Smith for a soul-shattering a cappella performance of “His Piano. In addition, a tremendous thank you to soloist Max Smith for a soul-shattering a cappella performance of “His Piano.

Thank you all for supporting a growing artistic community and helping to preserve the longevity of the Opera House— you make the difference!

Truly,
Michelle Connolly
Executive Director, Earlville Opera House
**CAMPING TIPS**

From a “macro” perspective, the general principles of camping are relatively simple. More than anything else, it’s a matter of adaptation and acclimation to living outdoors rather than within four walls. Regardless, there are a multitude of tips and tricks to make that transition easier, and allows your time spent camping to be more relaxing and enjoyable.

**General Outdoor Tips**

The tent is the focal point of most camping trips. If you’re a beginning camper, there are a couple of different tent tips to remember. First and foremost, practice pitching your tent before you head to the campground. Being able to do so quickly and effectively is extremely valuable when looking for a place to set up, always look for a “natural bed” of soft, flat soil – but avoid the bottom of hills and valleys. Finally, always set up a tent below your tent to avoid potential damage to waterlogging.

Campers can also benefit from a few non-specific outdoor principles. Rule number one, no matter the time of year, is to dress in (or at least carry) layers. It’s the easiest and most effective way to control your body temperature. Secondly, learn how to use a GPS or map and compass. No matter how familiar you are with a certain wooded area, getting lost among acres of similar-looking trees is very easy. Finally, practice basic skills such as using and sharpening a utility knife, tying various knots, and building a fire. This is knowledge that separates the amateurs from the seasoned campers.

**Buying a Sleeping Bag**

Determine the Purpose of the Sleeping Bag.

If being used for family camping – consider weight and size determination.

Determine the Shape.

Rectangular type provides more space for movement.

Canister type or double sleeping bag can be fully opened and used as an extra blanket.

Mummy type, with weights of 2 lbs or less, smaller size requires less energy to keep warm at night. Has a hood to pull tight around your head.

**How to Budget for a Camping Trip**

How to squeeze outdoor adventure into your budget, nothing is left to keep you from getting the woods! If you’re interested in more detailed information, take a look at the links below for some specific advice on the more nuanced aspects of camping. Camp life is made easier by gaining experience and learning the tricks. Here are some great camping tips and advice to help make your camping adventures more enjoyable.

**RV RENTAL**

RV rental has become a popular alternative form many outdoor enthusiasts. You can rent anything from a pop-up camper to a luxury motorhome to accommodate whatever your recreational interests or business needs are.

People rent their RV’s for a variety of reasons such as vacation, special events (tailgating at races, sporting events, festivals), hunting season, business travel and office space. Renting an RV is a cost effective alternative for the casualRVr. Another reason to rent an RV is to simply “test drive” the RV lifestyle and to try various types of RV’s before actually buying one. Like always, actual experience is worth its weight in gold.

RV’s provide the freedom to travel just about anywhere you can imagine. They are fully self contained and enable you to set up “camp” even in the remotest areas without sacrificing your comfort. They are rather easy to operate and of most of them don’t require any special license. You can rent various sizes of motorhomes, travel trailers, truck campers, conversion vans or pop-ups. The most popular type of RV is rented to tend to be the Class C motorhomes. They are equipped with TV’s, DVD, and offer a few creature comforts. Amenities include beds, bathoom and shower facilities, kitchens with microwaves and refrigerators, air conditioning and heat, etc. These come with just about anything you’ll need. Supplies such as dishes, pans, utensils and linens are usually included (some for a fee). Most RV operation instructions are usually given prior to departure.

Many travel magazines agree that RV rentals are a very affordable way to go. They recommend that you book your RV rentals well in advance. Summer season rentals get booked quickly in many areas especially those near popular racing or sporting events.
CAMPING WITH YOUR DOG

Are you thinking about taking your dog camping? The outdoors is one of the best places to spend time with your dog. Be sure to have all the proper gear. Tents, air mattresses, and most importantly, they are extremely comfortable. In addition to a tarp and netting keep you out of the elements, toasty warm and away from the nagging bugs.

Have you ever considered using a hammock as an alternative to the traditional tent? Many others have! Hammocks are a wonderful addition for backyard enjoyment. The benefits are many, as they provide a relaxing place to lie in the sunlight, read a book, or just watch the world go by. A hammock can be used for just about any environment: in the backyard, in the woods, or even on the beach. The possibilities are endless.

Camping in a hammock is one of the most effective ways to reduce stress and is a great way to relax. The way that the hammock conforms to your body's natural shape and the fact that your body’s weight is so evenly distributed provides you a feeling of calmness that cannot be found in a sleeping bag or tent. Hammocks are a great alternative when camping and are a wonderful addition for backyard enjoyment. The benefits are many, as they provide a relaxing place to lie in the sunlight, read a book, or just watch the world go by. A hammock can be used for just about any environment: in the backyard, in the woods, or even on the beach. The possibilities are endless.

Jeffrey M. Epstein, President and Chief Executive Officer, has been named to the National Academy of Sciences (NAS) Class of 2018. Epstein has made significant contributions to the field of epigenetics, particularly in understanding how changes in gene expression can be passed down through generations.

The NAS is an independent, nonprofit institute that is dedicated to promoting the progression of science and its application for the benefit of the public. Members are elected by their peers from among the nation’s leading scientists.

The recognition by the NAS is a significant honor, as it is awarded only to individuals who have made exceptional contributions to the science community. Epstein’s inclusion in this prestigious group underscores the high regard in which he is held by his peers and the importance of his work in advancing our understanding of epigenetics and its implications for human health.

Epstein’s research has focused on the role of epigenetics in disease, with particular emphasis on cancer. His work has helped to identify new targets for therapeutic intervention, and has led to the development of novel approaches for treating cancer and other diseases.

We congratulate Jeffrey M. Epstein on this achievement and look forward to seeing his continued contributions to the scientific community.

For more information, please visit the National Academy of Sciences website at https://www.nasonline.org.

**Putting The Brakes On Metastatic Cancer**

Medical researchers find 11 genes responsible for the spread of cancer

Date: June 20, 2018
Source: University of Alberta Faculty of Medicine & Dentistry

In a new study published in Nature Communications, the team found that by inhibiting several newly identified gene targets they could block more than 99.5 per cent of cancer metastasis in living cells.

“The potential significance is incredible,” said John Lewis, the Alberta Cancer Foundation Frank and Carla Sojonky Chair in Prostate Cancer Research at the U of A and a member of the Cancer Research Institute of Northern Alberta (CRINA). “Metastasis kills 90 per cent of all patients with cancer, so if we can stop metastasis at any step of progression in cancer patients, we’re going to have a significant effect on survival.”

The team is now hoping to progress to human trials over the next few years. The Lewis lab is also expanding efforts to explore for other types of genes called microRNAs that may present even stronger therapeutic targets for preventing metastasis.

The research was funded by the Canadian Cancer Society and the Alberta Cancer Foundation.

“As the largest national charitable funder of cancer research, we are committed to funding the very best cancer research in Canada to help us towards the goal of curing cancer. Through this investment we like to see,” said George Andrews, President and CEO of the Alberta Cancer Foundation. “We are proud to have supported the work of Lewis and his team in developing this innovative new tool and applied for it to broaden our understanding of cancer metastasis. Discoveries like this will provide new leads on how we can block cancer from spreading and improve the outcomes of those affected by this disease.”

“Our donors have been proud to support Dr. Lewis and his team for years and this is exactly the type of return on investment we like to see,” said George Andrews, President and CEO of the Alberta Cancer Foundation. “This groundbreaking research has a direct impact on improving treatment for patients and beyond and we are excited to see it translate into real outcomes for Albertans facing cancer.”

Scientists Print Sensors On Gummi Candy

Printing microelectrode arrays on gelatin and other soft materials could pave the way for novel medical diagnostics tools

Date: June 21, 2018

Microelectrodes can be used for direct measurement of electrical signals in the brain or heart. These applications require soft materials, however. With existing methods, attaching electrodes to such materials poses significant challenges. A team at the Technical University of Munich (TUM) has now succeeded in printing electrodes directly onto soft substrates.

Researchers from TUM and Forschungszentrum Jülich have successfully turned to perform inkjet printing onto a gummy bear. This might initially sound like scientists at play – but it may in fact point the way forward to major changes in medical diagnostics. For one thing, it was not an image or logo that Prof. Bernhard Wolfrum’s team deposited on the chewy candy, but the researchers tested the process on various substrates, including PDMS (polydimethylsiloxane), a soft form of silicon -- agarose -- a substance commonly used in biology experiments -- and finally various forms of gelatin, including a gummy bear that was first melted and then allowed to harden. Each of these materials has properties suitable for certain applications. For example, gelatin-coated implants can reduce unwanted reactions in living tissue.

Through experiments with cell cultures, the team was able to confirm that the sensors provide reliable measurements. With an average width of 30 micrometers, they also permit measurements on a single cell or just a few cells. This is difficult to achieve with established printing methods.

“The difficulty is in fine-tuning all of the components -- both the technical set-up of the printer and the composition of the ink,” says Neuran Adly, the first author of the study. “In case of PDMS, for example, we had to use a pre-treatment we developed just to get the ink to adhere to the surface.”

Wide range of potential applications

Printed microelectrode arrays on soft materials could be used in many different areas. They are suitable not only for rapid prototyping in research, but could also change the way patients are treated. “In the future, sensors could be used to monitor nerve or heart functions in the body, for example, or even serve as a pacemaker,” says Prof. Wolfrum. At present he is working with his team to integrate these microelectronic electrode arrays. They are also studying the possibility of creating applications that react selectively to chemical substances, and not only to voltage fluctuations.

Lord, help me not to lean on my own understanding but in everything acknowledge You so that You can direct my words, in thought and actions. In Jesus’ Name, Amen. – Sharon Glasgow

Outdoor Summer Fun

Lawn Twister

Cut a 10 inch circle out of a pizza box and use it for a template. Paint different color circles using contractors marking paint. Then cut out the circles and punch a hole in the center. When the ants are all around, you can make the lines straight, but you could also just “eyeball” the placement of the dots and you’d do just fine. You can make the lines thicker by twisting the paper from the circle that you cut from the pizza box or use a paper plate.

Terracotta Pot Fire Pit

Line a terracotta flower pot with foil, fill with charcoal bricks. Voila! Bring on the smores!

DIY Strawberry Ice Cream In A Bag!

Strawberry Ice Cream in a Bag

Ingredients:
- 1 1/2 cup heavy cream
- 1/2 cup half milk or half cream
- 1/2 tsp vanilla
- 3 tbsp of pureed strawberries (If you want plain vanilla, just leave out the strawberries)
- 3 tbsp of sugar (possibly less if you prefer your ice cream less sweet)
- ice

Steps:
1. Mix together the milk, cream, vanilla, sugar and strawberries in the quart bag. Close the bag and be sure it is completely sealed. (Be careful not to get any strawberry purée in the “zippers”)
2. Fill the gallon-size bag 3/4 the way full and add about 1/4 cup of rock salt to the bag of ice.
3. Place the smaller bag of ice cream ingredients into the larger gallon bag and seal the bag.
4. Wrap the towel around the bag and get to shaking the bags like crazy for 5 to 10 minutes, or until the ice cream is ready.
5. Open the bags carefully, don’t want any ice water in your ice cream! Serve immediately and enjoy.

Pumping Your Own Gas....

Bob Rakes of Petroleum Equipment Institute is working on a campaign to try and make people aware of fires as a result of “static” at gas pumps. He says his company has researched 150 cases of these fires. His results were very surprising:
1) Out of 150 cases, almost all of them were women.
2) Almost all cases involved the person getting back in their vehicle while the nozzle was still pumping gas, when finished they had to pull back to pull the nozzle out the fire started, as a result of static.
3) Most had on rubber-soled shoes.
4) Most men never get back in their vehicle until completely finished. This is why they are seldom involved in these types of fires.
5) Don’t ever use cell phones when pumping gas.

WEDDING SMELLS
A couple decides to get married.
As the day gets closer, they grow apprehensive.
Each has a problem they’ve never shared with anyone, not even each other.
The groom-to-be decides to ask his father for advice.
“Father, I am deeply concerned about the success of my marriage.
I love this woman, but I have smelly feet.
I’m afraid that she’ll be put off by them.”

“No problem,” says Dad.
“Just be sure to wash your feet often, and always wear socks, even to bed.”
The bride-to-be approaches her mother with her problem.
As the day gets closer, they grow apprehensive.
Each has a problem they’ve never shared with anyone, not even each other.
The bride-to-be decides to ask her mother for advice.
“Mother, when I wake up in the morning, my breath is truly awful.”

“Try this,” she replies. “In the morning, get right out of bed, go to the bathroom and brush your teeth. Don’t say a word until you’ve finished, her mother affirms.
The couple finally gets married in a beautiful ceremony. Not forgetting the advice each had been given, they manage quite well. That is, until about six months later. On that night, the husband wakes to find that one of his socks had come off. Fearful of the consequences, he frantically searches the bed, waking his bride. Without thinking, she asks,
It’s better to be a has-been than a never-was.

The easiest way to eat crow is while it’s still warm. The best sermons are lived, not preached.

“Who else?” asked Dorothy. “I have told you about Betsy Bobbin, the little girl who was shipwrecked—in the same way once were—since she has followed the Shaggy Man in his search for his lost brother. You remember her, don’t you?”

“Ozma,” Dorothy said, “you’re a dear little girl, and old Tik-Tok came from the Land of Ev. But of course he is not a loyal subject. Indeed, no one of you three was a native of Oz. You, my dear, have proved true and loyal subjects. Indeed, no one of you three was a native of Oz. It is the cause of all my worry, for our dear Shaggy will not return here and desert the new friends he has found in his recent adventures, because he believes they need his services.”

Chapter Twenty-Four - Continued

“Did you want to see me, Ozma?” she asked. “Yes, dear. I am puzzled how to act, and I want your advice.”

“Shaggy Man was always kind-hearted,” remarked Dorothy. “But who are these new friends he has found?”

“Tik-Tok was always kind-hearted,” replied Dorothy, “of course my dear Shaggy will not return here.”
